SAMPLES

For PCR, all fluids must be collected on EDTA tubes and **cells on swab/cytobrush in a plain tube. Never use heparin tube even for sending swabs/cytobrushes.**
Minimum volumes Blood: 0.5 mL Bone marrow: 0.1 mL CSF: 0.3 mL Urine, BAL: 4 mL - It is possible to perform the analyses with a volume lower to the recommendation but the diagnostic sensitivity can be decreased. Unless you clearly specify not to do it, several samples from the same animal, sent simultaneously, may be pooled before analysis.
